

Balloons Blow... Don't Let Them Go!

- All released balloons become hazardous litter.
- Animals mistake balloons as food or get entangled in any attached strings – injuring or killing them.
- Latex balloons are falsely-marketed as “natural” or “biodegradable”, made with chemical additives, they last years poisoning the environment.
- Mylar or foil balloons can cause power outages and spark fires when they make contact with electrical power equipment.
- Balloons are wasteful of finite Helium, experts warn its dwindling supply should be conserved for where it is critically needed.
- Choosing alternatives is a simple way to help protect the planet, conserve finite resources, and create less waste.
