

Sky Lanterns are not eco-friendly!

- Sky lanterns are an uncontrollable fire hazard.
- They have sparked massive wildfires & structure fires - burning homes.
- People have suffered serious burns as the dripping fuel falls from the swaying lantern or the lantern suddenly drops from the sky.
- Falsely marketed as biodegradable, the chemically treated paper, bamboo ring, metal wires, & fuel cell can last over a year- polluting the planet & risking harm to other lives.
- Animals have become entangled in them or have ingested the parts - a slow agonizing death as the wires pierce internal organs.
- The bamboo ring can become a death trap to any curious animal.
- Releasing sky lanterns is in violation of international fire codes which require that fires be constantly attended until extinguished.
